

SOLAR MIXES

TECH SHEET

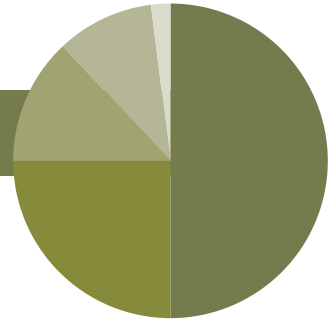

PANEL MOWER

Panel Mower is ideal when seeding your solar farm project to a mix that you'll continue to maintain through mowing. A fast establishment of Annual Ryegrass will help the perennial species through the initial year. Our blend of hardy fine fescue combined with Crested Wheatgrass ensures growth in even the harshest soil conditions and the driest of years. It'll be quite nice to have a pollinator species in White Dutch Clover amongst the grasses, and this rhizomatous clover along with Kentucky Bluegrass helps ensure constant cover for persistent weed suppression.

MIX RATIO

- 50% Solar Array Brand Fine Fescue (50 lbs/acre)
- 25% Kentucky Bluegrass (25 lbs/acre)
- 13% Annual Ryegrass (13 lbs/acre)
- 10% Crested Wheatgrass (10 lbs/acre)
- 2% White Dutch Clover (2 lbs/acre)

*These amounts are based on percentage of population
Comparable substitutions may be necessary depending on species availability

AGRONOMICS

Seeding Depth	1/4 inch
Total Seeding Rate	100-150 lbs/acre
Seeding Instructions	Drill into a firm, clean seed bed
