

TECH SHEET

SIBERIAN MILLET

- The fastest maturing hay millet
- Provides hay that will cure easily and be palatable for livestock

Siberian Millet is a warm-season annual grass and a foxtail type millet. It is a shorter variety that is commonly planted as a single-cut hay millet. Siberian Millet is the fastest maturing hay millet and will reach maturity about a week earlier than German or White Wonder Millet. It works well grown as a forage in very dry conditions or in northern climates with a short growing season. It produces hay that will cure easily and be palatable for livestock. Siberian Millet is very drought tolerant and will grow rapidly during hot summer conditions. It does well in light soils due to its high level of water efficiency.

AGRONOMICS

Seeding Depth	1/2-3/4 inch
Seeding Rate	Drilled: 20-25 lbs/acre
Best Use	Hay
Quality	Average
Maturity	Early
