FORAGE COLLARDS

Forage Collards are a brassica utilized for excellent early summer through winter grazing, superior forage quality and palatability, and for reducing soil erosion and compaction. Able to thrive under a wide range of conditions, forage collards are drought tolerant and one of the most winter hardy brassicas available.

AGRONOMICS

Seeding Rate	Drilled: 5-8 lbs/acre Broadcasted: 8-12 lbs/acre
Seeding Depth	1/4-1/2 inch
Height	2-4 feet
Package	50 lb bag
