TECH SHEET

GERMAN MILLET

German Millet is a warm-season annual grass and a foxtail type millet. German Millet is a fine-stemmed, leafy variety that is commonly planted as a single-cut hay millet. German Millet is quick maturing and works excellent in double cropping scenarios where time becomes limiting for the second crop. It can be ready to cut for hay in as little as 60 days from planting. It produces hay that will cure easily and be highly palatable for livestock. German Millet is very drought tolerant and will grow rapidly during hot summer conditions. It does well in light soils due to its high level of water efficiency.

AGRONOMICS

Planting Time	Late Spring-Mid Summer
Drilled Seeding Rate	20-25 lbs/acre
Seeding Depth	1/2-3/4 inch
Package	50 lb bag, 2,000 lb tote
