## LADAK ALFALFA

Ladak alfalfa is a line of alfalfa genetics that was introduced to the U.S. in the early 1900's, making it one of the earliest used alfalfas in the country. Since then, alfalfa breeders have made improvements on these genetic lines resulting in increased performance over the original Ladak alfalfas. Alfalfa from these lines will be the most drought tolerant and winter hardy alfalfa on the market. We carry improved varieties of Ladak such as Big Sky Ladak, which have much higher yield potential and better disease resistance than the original lines. Ladak alfalfa is an excellent solution for dryland hay production, rangeland interseeding, or reclamation in western environments.

### AGRONOMICS

Planting Time	Early Spring or Late Summer/Early Fall
Seeding Rate	<b>Good Soil, Adequate Moisture:</b> 15-20 lbs/acre <b>Light Soil, Dry Conditions:</b> 12-15 lbs/acre
Seeding Depth	1/2
Package	50 lb bag, 50 lb bag Pre-Inoculated
