NEW ENGLAND ASTER

New England Aster is a perennial forb which is grown for prairie restoration, wildlife cover, and landscaping. When mature, the flower grows from 2 ½' to 6' tall with up to 40 or more flowers, which have open vibrant purple petal surrounding yellow disc flowers. New England Aster is known to attract bees, butterflies and moths.

AGRONOMICS

Light Requirements	Full
Bloom Period	August-October
Bloom Color	Purple
Mature Height	5 feet
Soil Moisture	Wet to Medium
Seeding Rate	1-2 lbs/acre
Package	1 lb, 5 lb
Planting Instructions	Site preparation is vital for allowing your seed to make clean contact with the soil, allowing for successful and uniform germination. Start with a clean, firm, weed-free seedbed to allow for uniform seed placement and an increased chance for faster establishment.
