PARTRIDGE PEA

Partridge Pea is an annual native legume that grow on prairies, riverbanks and some upland woods. The plant grows narrow dainty leaflets along with 1" yellow flowers which grow into clusters along the stem. Partridge Pea is widely grown for wildlife use as they are high protein and easily digestible. It is a great choice for disturbed areas needing erosion control as it establishes quickly and fixes nitrogen well in its flowering stage.

AGRONOMICS

Light Requirements	Full, Partial
Bloom Period	July-September
Bloom Color	Yellow
Mature Height	2 feet
Soil Moisture	Medium to Dry
Seeding Rate	20-25 lbs/acre
Package	1 lb, 5 lb
Planting Instructions	Site preparation is vital for allowing your seed to make clean contact with the soil, allowing for successful and uniform germination. Start with a clean, firm, weed-free seedbed to allow for uniform seed placement and an increased chance for faster establishment.
