PRAIRIE CONEFLOWER

Prairie Coneflower is a summer perennial that attracts butterflies and songbirds. It grows to 3 or more feet when mature. Five to eight yellow petals surround a brown/black seed disc to create a cone shape. The Prairie Coneflower can be found growing in prairies, roadsides and the margins of wooded areas.

AGRONOMICS

Light Requirements	Full, Partial
Bloom Period	July-September
Bloom Color	Yellow
Mature Height	5 feet
Soil Moisture	Medium
Seeding Rate	1/2 lb/acre
Package	1 lb, 5 lb
Planting Instructions	Site preparation is vital for allowing your seed to make clean contact with the soil, allowing for successful and uniform germination. Start with a clean, firm, weed-free seedbed to allow for uniform seed placement and an increased chance for faster establishment.
