PURPLE PRAIRIE CLOVER

Purple Prairie Clover is a native, warm-season perennial legume found on many prairies with varying soil types. This forb makes a highly palatable and high in protein forage for livestock and wildlife. Aside from beautification, the Purple Prairie Clover can be planted for prairie restoration for its role in nitrogen fixation.

AGRONOMICS

Light Requirements	Full, Partial
Bloom Period	July-September
Bloom Color	Purple
Mature Height	2 feet
Soil Moisture	Medium to Dry
Seeding Rate	4-6 lbs/acre
Package	1 lb, 5 lb
Planting Instructions	Site preparation is vital for allowing your seed to make clean contact with the soil, allowing for successful and uniform germination. Start with a clean, firm, weed-free seedbed to allow for uniform seed placement and an increased chance for faster establishment.
